FDD Abstract of

HOHENTHURM BOILER CONSTRUCTION (German; one page; undated)

25X1X

This typewritten document contains the following information:

Construction of a boiler at Erfurt, which was mentioned in an earlier report of the year's program, has been taken out of the quota for the Hohenthurm Boiler Construction Plant. It has not been made clear, whether construction of this boiler is being postponed, or whether the order will be taken over by Bergmann-Borsig. If this boiler will not be constructed, the power program of the GDR would remain behind schedule. The present electric power supply in the GDR is insufficient.

To replace the order for Erfurt, Hohenthurm is to manufacture 50 fire-tube boilers for export to the USSR. These are boilers which were indicated as left-overs from the 1951 order in earlier reports.

Hohenthurm has been named as the plant to concentrate on the construction of large diameter boiler drums.
